

Experiment Nr. 31

Superconductivity

Date of Submission: May 2, 2026

Group Nr. M602

Pravin Mani Kannan
Mat. Nr: 23459332

Barathraj Radhakrishnan Subramanian
Mat. Nr: idk

Contents

1	Introduction	1
2	Electrical Resistance and Temperature Dependence	1
2.1	Metals	1
2.2	Semiconductors	1
2.3	Superconductors and BCS Theory	1
3	Magnetic Properties of Superconductors	1
3.1	Ideal Diamagnetism and the Meissner Effect	1
3.2	Type-I vs. Type-II Superconductors	1
3.3	Flux Quantization and Abrikosov Vortex Lattice	1
4	Magnetic Susceptibility and Magnetization	1
4.1	Diamagnetic, Paramagnetic, and Ferromagnetic Materials	1
4.2	Magnetization Curves of Superconductors	1
4.3	Critical Field, Temperature, and Current Density	1
5	Experimental Methods	1
5.1	Four-Point Probe Measurements	1
5.2	Inductive AC-Susceptibility Measurements	1
5.3	Deep-Stick Setup and Lock-In Technique	1
6	Conclusion	1

- 1 Introduction
- 2 Electrical Resistance and Temperature Dependence
 - 2.1 Metals
 - 2.2 Semiconductors
 - 2.3 Superconductors and BCS Theory
- 3 Magnetic Properties of Superconductors
 - 3.1 Ideal Diamagnetism and the Meissner Effect
 - 3.2 Type-I vs. Type-II Superconductors
 - 3.3 Flux Quantization and Abrikosov Vortex Lattice
- 4 Magnetic Susceptibility and Magnetization
 - 4.1 Diamagnetic, Paramagnetic, and Ferromagnetic Materials
 - 4.2 Magnetization Curves of Superconductors
 - 4.3 Critical Field, Temperature, and Current Density
- 5 Experimental Methods
 - 5.1 Four-Point Probe Measurements
 - 5.2 Inductive AC-Susceptibility Measurements
 - 5.3 Deep-Stick Setup and Lock-In Technique
- 6 Conclusion
